Title:	Annotation of Multiword Expressions in the Prague Dependency Treebank
Paper:	PDF
Category:	paper
Keywords:	annotation, lexical semantics, multiword expressions, treebank
Abstract:	In this article we want to demonstrate that annotation of multiword expressions in the Prague Dependency Treebank is a well defined task, that it is useful as well as feasible, and that we can achieve good consistency of such annotations in terms of inter-annotator agreement. We show a way to measure an agreement for this type of annotation. We also argue that some automatic pre-annotation is possible and it does not damage the results.
